

Melavill[®] Plus[®]

**Additive for improving
the viscosity of Melavill.[®]**

Product	Melavill Plus[®] is a special additive to improve the viscosity of Melavill [®] at cold temperatures.
Application	Melavill Plus[®] is a solid aggregate (granulate - fine to coarse) which is added to the hot processable, tempered casting compound Melavill [®] . The improved product properties of Melavill [®] have a positive effect on the workability of the bitumen hot sealing compound at cold temperatures and improve the sliding properties when ramming the sheet piling elements.
Processing	Melavill Plus[®] is added in small quantities directly to the Melavill [®] , which is heated to max. 200 °C in a suitable indirectly heated stirrer, and mixed homogeneously with the sealing compound. Overheated sealing compound should no longer be processed. The amount added depends on the respective outside temperature. above 5°C: no addition required up to 0°C: approx. 1.5 % addition below 5°C: approx. 3.0 % addition
Storage	The product must be kept in its original packaging, protected from sunlight, UV radiation and extreme external influences such as heat, cold and moisture.
